

Privacy Policy for the Project: Influence of social media on the price development of cryptocurrencies**Created by: Sina Haghgoo, Finnian Dempsey, Tobias Ponesch****Data Processing 2: Scalable Data Processing, Legal & Ethical Foundations of Data Science**

We are a group of three students and our ambition is to extract and collect data from the Subreddit r/ethereum, r/solana and r/SHIBArmy for the sake of our university project from the Vienna University of Business and Economics in the course 1083 “Data Processing 2: Scalable Data Processing, Legal & Ethical Foundations of Data Science”. We want to create a machine learning algorithm that analyses the overall sentiment of the named subreddits in order to make predictions on the price development of cryptocurrencies. This project is being made for educational purposes and is not intended to make profits, nor to be sold, but solely to deepen and apply our knowledge in order to get a good grade. We will delete the collected data shortly after completing and submitting the final project to our course instructors on the 8th of February 2023.
